INTERVENTIONS

ENHANCING ACCESS TO PRIMARY HEALTHCARE

TARGETED HEALTH INTERVENTIONS

STRENGTHENING PUBLIC HEALTH SYSTEMS AND
MEDICAL INFRASTRUCTURE

BUILDING HEALTHIER COMMUNITIES

20 At JSW Foundation, our commitment to nation-building begins with strengthening the health of communities. Through our Health and Nutrition portfolio, we strive to reduce disparities in healthcare access, address the needs of vulnerable populations, and build a foundation for long-term well-being.

Our efforts align closely with national priorities and global frameworks like the UN Sustainable Development Goal 3 (Good Health and Well-being). With a dual focus on direct community outreach and institutional strengthening, our initiatives ensure that quality healthcare is accessible, affordable, and delivered with dignity.

SCALING WITH PURPOSE

A collaborative, community-centred approach

Our health and nutrition programmes are implemented in close collaboration with:

governments	institutions
State and district health departments	Reputed medical institutions such as Tata Memorial Centre
partners	agencies
Civil society organisations and community-based partners	International organisations and expert technical agencies

This ecosystem-driven approach ensures that our interventions are evidence-based, scalable, and deeply rooted in community needs.

Beneficiaries

4.76 LAKHS+

Enhancing access to primary healthcare

Large sections of rural India struggle with limited access to qualified medical practitioners, diagnostic services, and referral pathways. To address these gaps, JSW Foundation continues to expand its comprehensive primary healthcare model.

Mobile Health Units (MHUs): Healthcare at every doorstep

Our MHUs function as fully equipped clinics on wheels, staffed with doctors, lab technicians, pharmacists, and field officers. Operating on pre-defined weekly routes, they deliver consistent primary care, medicines, diagnostic support, and health awareness sessions in remote villages.

In FY26, MHUs deployed across Vijayanagar, Barmer, Vilathikulam, Kayathar, and other locations collectively reached tens of thousands of individuals, conducted OPD consultations, and ensured early detection of non-communicable diseases such as diabetes and hypertension.

Community clinics and health camps

Our community clinics provide dependable, day-to-day healthcare access, while specialised health camps bridge critical service gaps by connecting patients to expert medical teams. From multispecialty camps to focused screenings, these efforts deliver essential care in areas that lack advanced medical facilities.

Emergency response through ambulance services

In regions with limited transportation infrastructure, timely emergency support can be the difference between life and death. JSW Foundation's ambulance services in multiple states ensure immediate medical response for trauma, maternal emergencies, and critical care needs, saving countless lives each year.

Beneficiaries

1.6 LAKHS+

Targeted health interventions

Beyond primary care, we implement specialised programmes addressing key public health challenges that disproportionately affect vulnerable communities.

Vision screening and correction

Good vision is essential for learning, productivity, and overall well-being. Through strategic partnerships, we conduct large-scale eye screenings, refractive corrections, and cataract surgeries that help prevent avoidable blindness. Our work has improved sight and restored independence for thousands, from school children to the elderly.

Nutrition support for TB patients

Malnutrition remains a major barrier in effective tuberculosis treatment. Under the Government's TB Mukht Bharat Abhiyan, we provide nutrition kits to TB patients, supporting treatment adherence, faster recovery, and improved immunity among some of the country's most vulnerable individuals.

Specialised care for children and vulnerable populations

Our programmes—such as rehabilitation services for neurological conditions, clubfoot correction, paediatric cardiac surgeries, and bone tumor treatment support—ensure that children and low-income patients receive life-changing interventions at critical stages of their lives. These partnerships deliver advanced care that many families otherwise cannot access or afford.

CONDUCTED

Strengthening public health systems and medical infrastructure

Long-term transformation in public health requires strong institutions. Our investments in health infrastructure aim to build durable, community-centric systems that will serve generations.

Strengthening local health systems

From multi-specialty hospitals like JSW Sanjeevani in Dolvi and Vijayanagar to support for district hospitals and primary health infrastructure, our partnerships reinforce public health facilities that communities rely on every day.

Redevelopment of St. Elizabeth's Hospital, Mumbai

The redevelopment of the historic hospital's B-wing is one of our most significant infrastructure projects, ensuring expanded capacity, modern clinical facilities, and improved care environments for patients from all sections of society.

JSW Centre on Climate Change and Health at PHFI

Recognising the growing intersection of climate change and public health, we established India's pioneering Centre on Climate Change and Health. This centre will drive interdisciplinary research, inform policy, and equip stakeholders to mitigate climate-linked health risks, building resilience for the future.

Maternal and child health infrastructure at VIMS Bellary

The creation of a 400-bedded Maternal and Child Health Wing at VIMS marks a transformative step in improving maternal and neonatal outcomes in Karnataka, ensuring access to specialised care for thousands of families.
