

## **Energy Management Policy**

***We at JSW Energy Ltd. (JSWEL) are committed to operate our Thermal Power Plants for generation of electricity in a manner that ensures energy efficiency and compliance with applicable legal and statutory requirements on energy management. Our efforts at enhancing the reliability and efficiency of plant operations are guided by energy conservation, optimal resource utilization and minimal environmental impact. Our organization shall strive to achieve efficient and effective energy management by:***

- Adoption of appropriate energy efficient and state of art technologies in products, services & processes having impact on energy use in operations, maintenance & allied activities.***
- Optimal use of all sources and forms of energy by adopting established industry best practices and effecting improvements through learnings from our own experience.***
- Continually monitoring and improving our energy performance aimed at setting efficiency bench marks and submission to energy audits and reviews based on industry feedback.***
- Raising awareness and making available resources to all personnel working for or on behalf of JSWEL and enabling them to implement efficient energy utilization and conservation practices.***
- Periodic review of energy management policies and related procedures and their continuous updation based on changes in legislation, organizational requirements and process changes.***
