

POLICY ON SUSTAINABLE STEEL
PRODUCTION

POLICY ON SUSTAINABLE STEEL PRODUCTION

PREFACE :

Title	Policy on Sustainable Steel Production
Version Number	1.00
Effective Date	28.01.2013
Authorised by	Board of Directors
Number of Revisions	None
Last Revised Date	N.A

The Company believes that steel has a major role in assisting the transition towards a sustainable economy where economic growth, conservation of environment and social responsibility work together. Towards this, the Company strives to:

- Ensure resource-efficient and sustainable manufacturing processes and technologies to produce the various marketable products
- Focus on product stewardship throughout the life cycle of the Company's products (design and disposal) and provide information on their safe use and recycling
- Review and implement new developments in steel making technologies, practices and sourcing, which have lower impact on environment and boost community development with complete respect for intellectual property rights and related issues
- Optimise utilisation of natural resources viz. water, raw materials, energy while focussing to reduce, reuse and recycle opportunities of these resources.
- Establish and maintain Environment Management Systems (EMS) across all operations to continuously monitor and improve our environmental performance and operating efficiency.

The Company is committed to measure and report progress against this policy and review performance on a periodic basis to ensure its implementation.
