

Energy Policy

We at JSW Steel, strive for the global recognition & excellence by achieving lowest specific energy consumption and taking proactive initiatives to combat climate change.

We are committed to:

- Continuous improvement in energy performance through resource optimization, deployment of latest technologies and cost effective usage of energy.
- Drive energy conservation and increase efficiency of our operations through deployment of innovative and reliable processes which enable effective reuse, recycle and reduction of resources.
- Perform beyond compliance with all the applicable statutory, regulatory and business requirements.
- Train and engage with relevant stakeholders in building responsible behaviours in usage of energy and facilitate installation of energy efficient Plant, equipment and other resources for future expansions.
- Harness green, clean or renewable energy sources for environmental protection and energy Security for sustainable growth.
